Acrylic Emulsion Primer (I)

Product description

Type
This product is an alkali resistant exterior emulsion primer. Based on acrylic copolymer emulsion.

Features and benefits
Excellent penetration into the substrate there by providing the best adhesion. Offers best protection against alkali attack. Resistant to algae and fungus.

Recommended use
Ideal for priming exterior surfaces. Can also be used to prime interior surfaces.

Substrate
Cement plaster, concrete, block work, rendered surfaces etc.

This is the theoretical value. Tested value will vary depending on test methodology, accuracy of equipment used for testing and test conditions.

Application data

The product can be applied by

Roller : Recommended.
Spray : Use airless spray or conventional spray.
Brush : Recommended to paint corners and edges.

Film thickness will vary and is calculated as average. Film thickness per coat values are presented here.

Theoretical spreading rate 14.5 - 10.5 m²/l

Maximum spread rate per coat is obtained at minimum dry film thickness and vice versa.

Conditions during application

The temperature of the substrate should be minimum 10 °C and at least 3 °C above the dew point of the air, measured in the vicinity of the substrate. Good ventilation is usually required in confined areas to ensure proper drying.

Drying times

Drying times are generally related to air circulation, temperature, film thickness and number of coats, and will be affected correspondingly.

1. Recommended data given is, for recoating with the same generic type of paint.

2. In case of multi-coat application, drying times will be influenced by the number and sequence and by the total thickness of previous coats applied.

3. The surface should be dry and free from any contamination prior to application of the subsequent coat.

The drying time is measured by stated values:

<table>

Directions for use

Surface preparation

The substrate must be sound, clean, dry and free from dust, oil, grease, laitance etc. All traces of form release agents/curing agents must be removed. A light sanding with suitable abrasive material is recommended before application. Any resulting dust/loose particles must be removed.
